

The figure is a dot plot with the x-axis labeled 'p-value of temporally-lagged spatial lag'. The x-axis has major tick marks at 0.00, 0.05, 0.10, 0.20, 0.50, and 1.00. There are three vertical reference lines: a solid black line at 0.00, a dashed red line at 0.05, and a dotted red line at 0.10. Ten data points, represented by dots of varying sizes and shades of gray, are plotted. All points are clustered near the 0.00 line, with the largest dot (black) exactly at 0.00 and the smallest dot (light gray) slightly to the right of 0.00.
